Visitor demand forecast

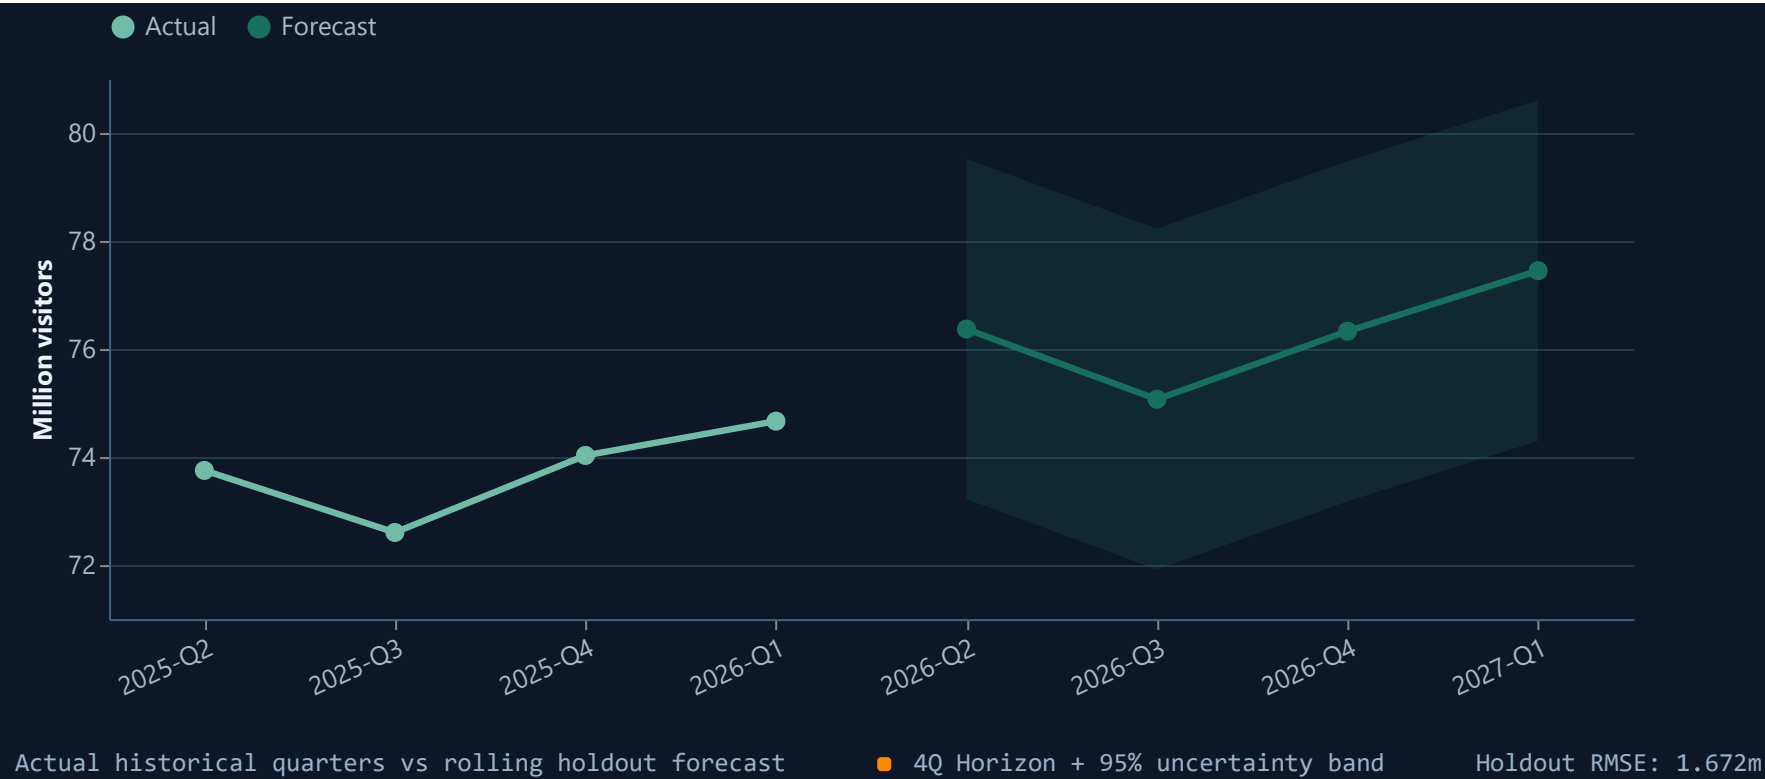

Expected domestic visitors for the next four quarters. Shaded range shows 95% model uncertainty.

Ensemble: Damped ETS + AutoReg

Environmental context

OpenDOSM air-quality stress index alongside tourism demand.

25.2/100

Recent demand momentum

Latest four-quarter change: +7.2%

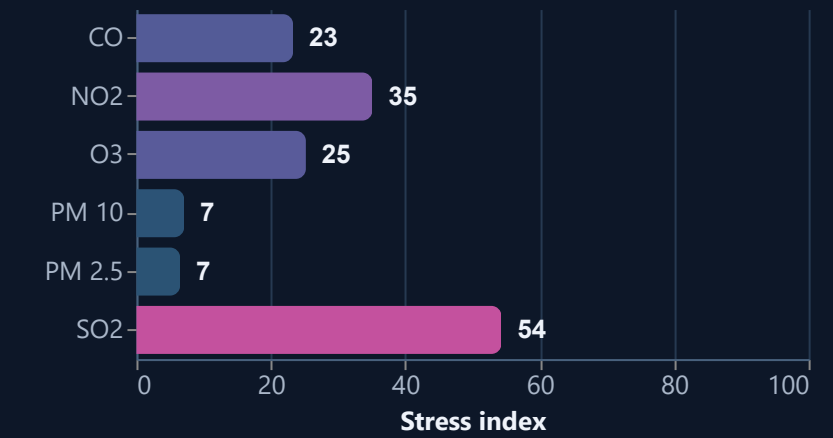

Quarterly seasonality

Model retains recurring Q1?Q4 demand pattern from DOSM history.

Backtest uncertainty

Typical holdout error: ?1.6 million visitors.

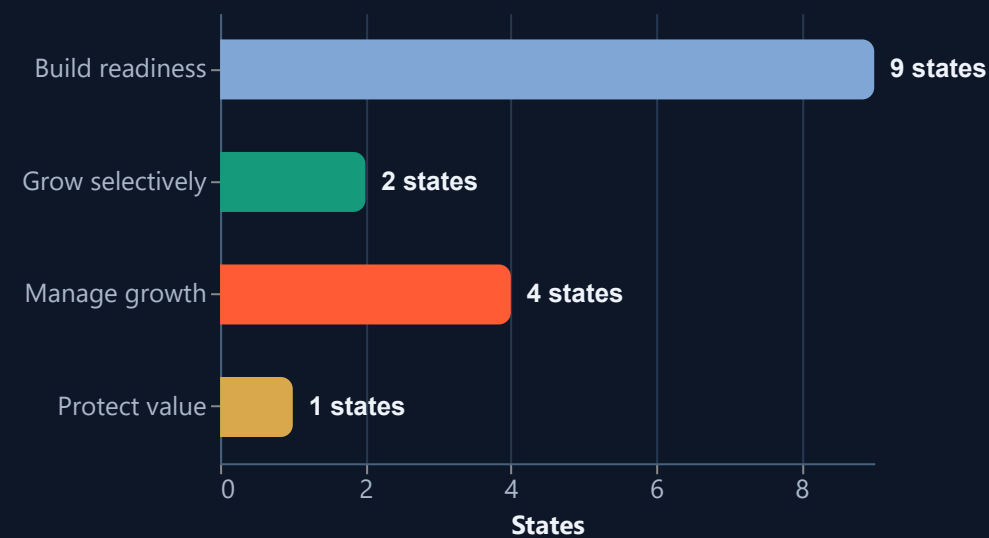

Official monthly air pollutant concentrations track ambient stress. Planners can audit whether destination surges arrive alongside ecological or local carrying burden.

National benchmark context: official monthly catalogue does not publish continuous state-level monitoring stations.

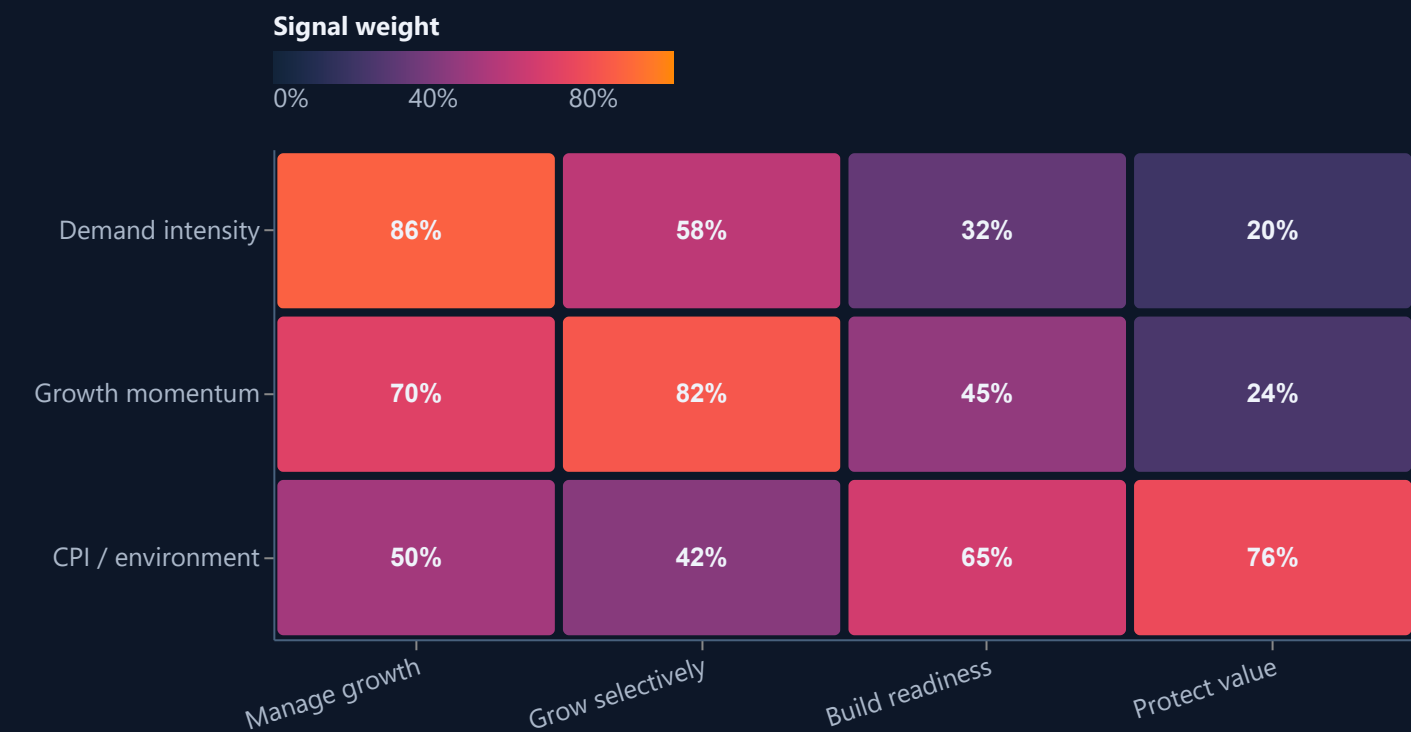

Portfolio posture distribution

Breakdown of all 16 states and territories across the 4 policy allocation quadrants.

Evidence-to-action matrix

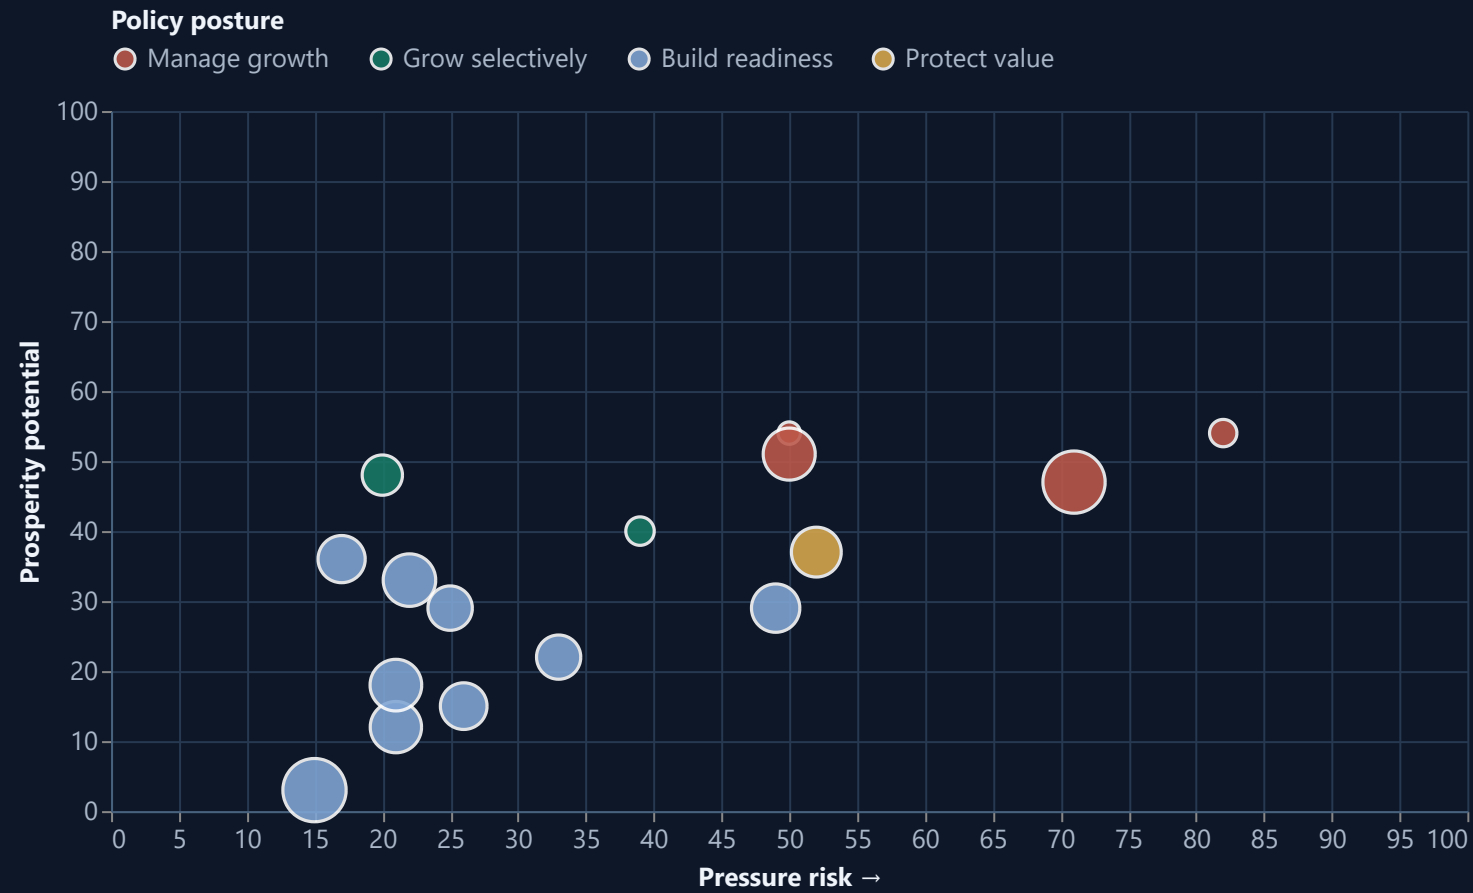

Inspect how empirical evidence signals map to strategic destination postures.

DECISION MATRIX

Pressure × prosperity

SELECTED DESTINATION

High confidence

Putrajaya

RECOMMENDED POLICY DIRECTION

Capacity-first growth

Protect service capacity, time-shift demand and grow only with safeguards.

Pressure risk

82 /100

Higher index means stronger demand pressure against local capacity.

Prosperity potential

54 /100

Higher index indicates room for high-value overnight tourism capture.
